EDUCATION

West Visayas State University

BS Information Technology | Major in Software Technology

GWA: 1.39

St. Roberts International College

Information Communication Technology (ICT)

WORK EXPERIENCE

Government Internship Program (GIP)

May 2025 - Present

Department of Information and Communications Technology (DICT) - Tech4ED

- Built the PESO Management System (DTC Job Fair) for applicant and interview tracking
- Integrated Firebase Firestore and Authentication for real-time data and user management
- Developed and maintained web-based management systems with React, Vite, Tailwind CSS, and Firebase

Front- end Developer Intern

Jan 2025 - Present

CALLBOX. INC (Callbox Avescor Motors Building, Second, M.H, Molo, Iloilo City)

- Optimized responsive web components to improve mobile usability. Redesigned key sections such as 'Industries We Serve' and eBook pages for better engagement and consistency.
- Implemented reusable front-end templates to streamline future development.
- Applied mobile-first design principles, assisted with WordPress content integration, and used basic SEO techniques to enhance site structure.

SKILLS

Web Development: HTML, CSS, SCSS, Tailwind, Bootstrap, Javascript, React

Database: Firebase, MySQL, Supabase

CMS: Wordpress

Infrastructure & DevOps: Vercel, Git, Github

Design & Prototyping: Figma, Canva

PROJECTS

Peso Management System | 2025 (<https://dtc-jobfair.vercel.app/login>)

DTC-JobFair is a PESO management system designed to streamline job fair applicant tracking and interview result management. Built with React, Vite, Tailwind CSS, and Firebase, it delivers real-time updates and a responsive interface for efficient event coordination.

Callbox Ebooks page | 2025 (staging.callboxinc.com/wilmer-ebook-template/)

Developed template layouts for Callbox using SCSS, PHP, HTML, and CSS. Designed multiple layout options for the company's main website, applying a mobile-first approach for responsiveness. Integrated layouts into WordPress and refined frontend styling based on supervisor-assigned design tasks.

Trash Trade Admin Website | 2024 (wilmer27-ai.github.io/trashtradeAdmin/log-sign/index.html)

TrashTrade is an admin dashboard developed for the thesis project Gamified Proper Waste Disposal System using Image Recognition with Raspberry Pi and Mobile App Integration. Built with JavaScript, Bootstrap, and Firebase, it enables real-time management of users, transactions, and rewards through Firestore and Authentication.
